

2016 Annual Conference Sponsor & Exhibitor Contacts

ACF Environmental

Booth # 10 & 11

At ACF Environmental, we understand that every minute on a project means money. So, our team of geosynthetic experts focuses to solve your project challenges from the first phone call to the last detail. We have a wide range of solutions from the best suppliers and a network of warehouses to deliver them when you want. Plus, ACF offers technical and job site support, and custom products if that's what is needed. We are in an industry that needs answers, not more questions. Getting the job finished quickly and effectively makes all the difference. There's work to do. LET'S GET IT DONE.

Advanced Drainage Systems

Booth # 6

At ADS, Inc., we develop state-of-the-art products to help solve storm water management and sanitary sewer challenges, while setting industry-wide standards for quality, durability and performance. ADS is proud to offer a complete line of corrugated HDPE & HP pipe including our fully approved N-12® Class II HDPE pipe for use in all storm drainage applications on FDOT facilities with the exception of 100-year DSL applications in the Florida Keys and our HP pipe which was granted 100-year design life by the FDOT for use in side drain, cross drain and storm sewer applications. ADS also offers fittings and accessories including StormTech® storm water chambers, Nyloplast® engineered drainage structures, Water Quality Units, BaySaver BMP's & stormwater treatment products, FLEXSTORM™ Inlet Filters, INSERTA TEE® manifold adaptors, ARC™ sanitary chambers, and various Geotextiles.

Aquatic Systems

Booth # 8

Aquatic Systems, Inc. is a Florida lake management company providing science based management solutions to storm water retention ponds, lakes and wetland areas. For over 35 years Aquatic Systems has invested in research and development to understand the underlying causes of algae blooms and invasive plant growth, midge fly invasions, muck, odors and water clarity/health issues. This approach allows us to bring better targeted, long term results that improve the health of lakes with the most environmentally sound means possible. Aquatic Systems has 11 offices throughout the state to serve private, commercial and public lakes, waterways, wetlands and preserves. Our professional staff includes aquatic limnologists and biologists to test, create and review management plans; sales and customer service personnel to respond to your needs and concerns; and field technicians who undergo the continuous training and testing to ensure they have the knowledge and tools to get the work done to your satisfaction. Contact us at 800-432-4302.

Milliken Infrastructure Solutions

Booth # 16

Milliken Infrastructure Solutions, LLC delivers a range of smart, practical, innovation solutions that repair failing infrastructure. Among these solutions is Concrete Cloth GCCM, a groundbreaking material technology that makes it possible to use concrete on slopes, in water, and in other hard-to-reach locations, without forms or mixing and minimal equipment requirements. Concrete Cloth GCCM can be quickly cut and secured in place, making it ideal for reinforcing or rehabilitating a culvert or drainage ditch, abutment, berm or other structure. Once hydrated, the cloth cures quickly to form a rigid, durable and water-resistant 5,000 psi armor. For more information: infrastructure.milliken.com

Oldcastle Coastal

Booth # 46

The time - tested advantages of concrete provide assurance the structural integrity and service life of Oldcastle products are a long term solution. Design and innovation make Oldcastle systems cost effective and maintainable. Permeable Pavers, recognized by the EPA as a structural BMP, have been extensively tested in Florida and are anticipated in the final draft of the new Statewide Stormwater Rules for Florida. The Storm Capture maximizes storage capacity within a minimum area, providing an HS-20 loading without the assistance of expensive select backfill materials. The goals of Low Impact Development, infiltration, storage, filtration and re-use are attainable and cost effective.

Oldcastle Precast

Booth # 17

Oldcastle Precast is a team of experienced stormwater specialists developing new products and individual solutions to meet the ever changing regulations that protect our environment. We offer a complete line of stormwater detention, retention, infiltration and treatment systems, all manufactured in our locations across the U.S. We specialize in underground stormwater storage products, stormwater treatment devices and Low Impact Development systems as well as rainwater harvesting equipment, water conveyance and custom solutions to meet the needs of any regulatory environment. Our stormwater storage systems provide site specific designs and help comply with the EPA's recommendations for mitigating the effects of stormwater runoff and volume control. Our stormwater treatment devices frequently exceed the required treatment levels for NPDES and MS4 requirements in any jurisdiction. From the start of construction to the completion of any project, Oldcastle offers a comprehensive approach to meet your stormwater management needs.

Plastic Tubing Industries

Booth # 3

Plastic Tubing Industries, Inc. (PTI) is a family owned business that manufactures corrugated HDPE pipe. We have been serving the stormwater, wastewater and agricultural industries since 1969. PTI's patented PIPE-R® Reservoir System is an exfiltration system that can be buried under anything nonstructural and replaces traditional retention/detention ponds. PIPE-R has the ability to use stormwater to recharge the surficial aquifer or reuse the water for applications like irrigation, flushing toilets, and cooling tower process water. PTI is licensed to manufacture and sell Bold and Gold® which is a biosorption activated media (BAM) developed by the Stormwater Management Academy at the University of Central Florida. Bold and Gold is a patented media that removes nitrogen and phosphorus from stormwater runoff. We look forward to meeting you at our booth and discussing how we are protecting valuable water and land resources while increasing usable land for our clients.

Precast Concrete Structures Association

Booth # 15

The Precast Concrete Structures Association is an integral influence in infrastructure development both for storm water and sanitary drainage systems for the state of Florida. PCSA works very closely with the Florida Department of Transportation to impact State specifications to accommodate a high quality and more efficient manufacturing process. The relationship with the FDOT that was cast in 1988 has strengthened to become one of the most cohesive and productive partnerships between trade associations and Florida state government. The PCSA membership has swelled to include almost every underground structure manufacturer in Florida. Its quarterly membership and FDOT meetings have kept the Industry on a productive track for almost three decades. The results of these meetings impact the drainage construction practices in literally every county, city, and private municipality in the state. And, PCSA personnel training and certification is now a mandatory part of FDOT specifications.

Suntree Technologies

Booth # 19, 20 & 21 & Lanvard Sponsor

Suntree Technologies Inc. designs and manufactures innovative and cost effective stormwater treatment solutions. Suntree's complete line of stormwater products enable municipalities to easily and economically retrofit watersheds for compliance without sacrificing quality. Suntree's patented Nutrient Separating Baffle Box removes thousands of pounds of foliage; oils; sediment, and litter from runoff. Suntree's complete line of fiberglass inlet filters capture hundreds of pounds of debris, are easy to install and maintain and are fully engineered with bypass to prevent flooding. Ask a Suntree representative about Hydro-Variant Technology: Treatment without headloss! We are the stormwater treatment specialists. Phone (321) 637-7552 or visit www.suntreetech.com email: info@suntreetech.com

Teledyne Isco

Booth # 4

No single measurement technology is suitable for all open channel flow monitoring applications. Only Teledyne Isco offers you a choice of ultrasonic, submerged probe, bubbler, area velocity and non-contact laser flow meters. Whether you need a permanent meter for a flume or weir, short term measurement with no primary device, or flow and pump performance monitoring at a lift station, Isco has the solution. And our application experts are available for a free, no obligation consultation to help you choose the best technology for your monitoring sites.

Wapro

Silver Sponsor

Wapro is a market leader in back flow protection in stormwater and sewer applications. Back flow can occur in outfalls creating flooding affecting homes and businesses. Back flow in pump stations can lead to expensive repairs. Overloaded stormwater networks can cause surcharges which flood properties, both inside homes and outside on streets and in parks and gardens. This flooding is easily stopped by using a check valve such a WaStop or WaBack. Easily installed in minutes and protecting against back flow for 20 years or more. WaStop inline check valve is the most cost effective long term option for backflow protection given that it is simple to install, requires virtually no maintenance or cleaning, and effectively stops all backflow in both high and low flow situations. WaStop has stopped flooding and protected properties for 16 years in 25 countries, including many installations here in Florida in particular. An investment in peace of mind.

Xylem

Booth # 9

Xylem and the YSI brands have specialized in the design, installation, and maintenance of Stormwater monitoring and sampling systems for over 20 years. Utilizing Xylem's full line of water level sensors from Waterlog, open channel and in-pipe flow meters from SonTek, water quality instruments and sensors from YSI, and our real-time data collection and sampler control systems from our Integrated Systems and Services division. Our equipment and instrumentation are used extensively in MS-4 / NPDES compliance and illicit discharge detection. Xylem is capable of providing a full range of versatile equipment solutions and optional field services for even the most challenging Stormwater application.
